

## ABSTRACT OF THE DISCLOSURE

A compression garment for compressing a portion of a body of a patient includes a tubular body. The body includes an outer layer and an inner layer secured to the outer layer. The inner layer at least partially bounds a channel adapted to receive a portion of a body of a patient. The inner layer includes a backing having a plurality of pressure projections extending therefrom. A layer of compressible cushioning material is disposed between the outer layer and the inner layer. Compression straps are disposed on the body for selectively constricting the body.
